EXPERIENCE

Solstice Power Technologies

Cambridge, MA (Remote)

Data Scientist

March 2022- Present

- Orchestrated the MLOps strategy and served as technical project manager after securing a \$850,000 grant from Google.org to support the full development of EnergyScore, a machine learning model designed to be a more inclusive and accurate risk predictor for financing clean energy products.
- Analyzed algorithmic fairness and bias metrics within credit risk alternative machine learning model, evaluating impacts on protected classes and developing guidelines for safe and ethical application by end users.
- Designed a custom churn prediction model using XGBoost classifier algorithm, using K-means to cluster customers into segments, leading to 39% decrease in churn for high-risk customers.
- Developed credit boosting project by designing an ETL pipeline between customer data and credit reporting agency, offering a no-cost no-risk service for customers to increase credit scores.

Durham-Carrboro-Chapel Hill Metropolitan Planning Organization

Durham, NC

Transportation Modeler

February 2020- March 2022

- Maintain and update regional transportation model providing predicted multimodal travel volume to support local, regional, state and federal funding of highway, transit and pedestrian networks.
- Apply advanced mathematical and machine learning techniques such as iterative proportional fitting, neural networks for multimodal choice, and decision tree models to determine the number and purpose of trips.
- Analyze and synthesize model scenario outputs using R and Python to build interactive data dashboards designed to increase accessibility, engage policymakers and to inform the public of trends in travel behaviors.

North Carolina General Assembly, Program Evaluation Division

Raleigh, NC

Program Evaluator

July 2018- February 2020

- Conducted comprehensive evaluations and recommend programmatic solutions for joint committee tasked with improving the effectiveness and efficiency of state policies to better serve constituents.
- Identified \$3.7 million in unnecessary state spending resulting from an errant matching mechanism for hurricane relief funding, allowing for future funds to be correctly utilized, resources conserved, and victims assisted.

AnLar, LLC

Rosslyn, VA

Statistician

May 2017- May 2018

- Lead data analyst responsible for statistical models for multiple reports published by the Institute for Education Sciences (IES) to identify trends in high school dropouts, college access, and financial aid.
- Designed survey weight methodologies, including bootstrap and balanced repeated replication techniques.

Cambridge Associates

Arlington, VA

Analyst

June 2014-August 2016

- Led team of four financial analysts in financial and regulatory research for nonprofit and endowments.

SKILLS

- | | |
|---|---|
| <input type="checkbox"/> Programming expertise in Python, R and SQL | <input type="checkbox"/> Machine learning algorithm design, development, and validation |
| <input type="checkbox"/> Data ETL and querying | <input type="checkbox"/> Model bias and fairness evaluation |
| <input type="checkbox"/> Geospatial analysis | <input type="checkbox"/> Retention and churn modeling |
| <input type="checkbox"/> BI Tools: Tableau, Plotly, Shiny | <input type="checkbox"/> Version control and git |

EDUCATION

Georgetown University

McCourt School of Public Policy, Master of Public Policy

Baker Innovation Scholar: Managed \$20,000 project to decrease truancy rates for at-risk youth at Anacostia High School

Editor-in-Chief, Georgetown Public Policy Review

Research Fellow, Center for Research on Children in the United States

Washington, DC

May 2018

Allegheny College

Bachelor of Science in Mathematics, Minors in Economics and History

Meadville, PA

May 2014
